RESTRICTION ON DISCLOSURE AND USE OF DATA (FAR 52.215-1(e))

This proposal includes data that shall not be disclosed outside the Government and shall not be duplicated, used, or disclosed — in whole or in part — for any purpose other than to evaluate this proposal. If, however, a contract is awarded to this offeror as a result of — or in connection with — the submission of this data, the Government shall have the right to duplicate, use, or disclose the data to the extent provided in the resulting contract. This restriction does not limit the Government's right to use information contained in this data if it is obtainable from another source without restriction. The data subject to this restriction are contained in all pages of this volume.

1. Maintenance Record Digitization and Data Extraction

Sentryline will digitize and extract every Army equipment maintenance record — DA Form 2404 inspection worksheets, DA Form 5988-E maintenance requests and the DA Form 2408 logbook series — through a single intake pipeline that combines layout-aware classification with field-level extraction.

On our current Army Materiel Command maintenance records pilot, the pipeline processed 2.1 million records from four depots with 96 percent field-level extraction accuracy. Records below the confidence threshold go to an Army maintenance clerk with the uncertain fields highlighted, and every correction retrains the model the following week.

Each extracted value keeps a link to the page it came from, so a maintenance supervisor can see exactly where a fault, part number or hour reading was recorded.

2. GCSS-Army Integration and Readiness Reporting

Extracted records post to GCSS-Army in real time through the approved interface, so equipment status and open faults reach unit readiness reports the same day they are recorded.

Maintenance officers see a live dashboard of open faults, parts on order and deadlined equipment by unit and installation. On the pilot, the time from a recorded fault to its appearance in readiness reporting fell from 6 days to under 1.

3. Cybersecurity and Risk Management Framework Compliance

The solution runs today in a DoD Impact Level 5 environment with an existing Authority to Operate under the Risk Management Framework, which this effort will inherit, and meets DFARS 252.204-7012 for safeguarding covered defense information.

Sentryline holds CMMC Level 2 certification. Continuous monitoring feeds the Army's cybersecurity service provider, and every release passes automated security scanning before deployment.
