UiPath

INDUSTRY BRIEF · FEDERAL ACQUISITION

Source selection, end to end with UiPath.

Agents read and draft. Robots check and file. People make every decision. One Maestro process runs the whole evaluation, so your team spends its time on judgment instead of paperwork.

TODAY

255 days

median from solicitation to award for the largest federal contracts[1]

- Evaluators read hundreds of pages per proposal and write every finding by hand
- Splits are reconciled in meetings, and the decision document is written from scratch
- 52% of GAO bid protest cases ended with relief for the protester[2]

WITH UIPATH

5 min 48 s

of robot and agent time for a full source selection, intake to award[3]

- Every proposal volume read, and every finding drafted with a page citation
- Consensus and decision documents drafted and ready for signature
- Every rating, consensus, price and award decision made by a person

Where time and protest risk concentrate.

Every federal contract dollar moves through a contracting office, and those offices are being asked to do more with less while the FAR itself is rewritten. Source selection is where the strain shows most: it is the most document-heavy, judgment-heavy step of an acquisition, and every rating has to be documented well enough to survive a protest.

$793B

federal contract obligations in fiscal year 2025[4]

11%+

smaller workforce across the CFO Act agencies since December 2024[5]

+70 days

added to the median lead time for the largest awards, FY2019 to FY2022[1]

One Maestro process, from proposals in to award.

UiPath Maestro runs the whole evaluation as a single, auditable process and sends each step to whoever does it best: robots for the repetitive checks, agents for the reading and drafting, and people for every judgment and signature.

STAGE	Robots do	Agents think	People lead
01 **Intake and compliance**	Ingest every proposal volume and screen each offeror against SAM.gov, exclusions and federal integrity records.	Build the evaluation plan from the solicitation, cost estimate and Section M. IXP reads every cover letter and price schedule.	The contracting officer checks the plan and releases proposals to evaluation.
02 **Individual evaluation**	—	Draft strengths, weaknesses and deficiencies for every factor, each cited to the proposal page it came from.	Evaluators accept, edit or reject each finding and assign their own ratings.
03 **Consensus**	Compile every evaluator's ratings and findings into one view of each offeror and factor.	Propose a consensus rating for each split and explain where the evaluators disagreed and why.	The board chair confirms each rating and signs the consensus report.
04 **Price**	Compare every offer and line item to the government estimate and flag any total more than 10% below it.	Draft the price reasonableness determination from the contracting officer's choices, citing the FAR.	The contracting officer decides how each variance is treated.
05 **Award decision**	File the complete award record and hand it straight to contract management.	Draft the source selection decision document from the consensus record.	The source selection authority writes the rationale and signs the award.

Maestro keeps the whole run in one place

It routes each task to the right robot, agent or person, flags work that is running late, and records every step and decision as it happens, in one live record.

Built on the UiPath Platform.

Maestro	Orchestrates the end-to-end process, every hand-off and every deadline.
Agents and IXP	Read the proposals and draft the findings, consensus and decision.
Robots	Ingest proposals, run compliance and price checks, file the record.
Data Fabric	Holds the record: plan, findings, ratings, price and decisions.
Action Center	Puts every review and signature in the right person's inbox.

Protest-ready by design.

Every rating traces back

Each rating links to its evaluators, the findings behind it and the exact proposal pages.

The record builds itself

87 audit events captured as the work happened in one run[3], with nothing reconstructed later.

People make every decision

Agents draft and robots check, but nothing is final until a person reviews it and signs.

THE VALUE

5 min 48 s

of robot and agent time to take one source selection from proposals in to award[3]

15
proposal volumes read

15
compliance checks run

45
findings drafted, each cited to its page

2
reports drafted for signature

Every hour the team spent went to judgment, not paperwork.

Robots do. Agents think. People lead.
