UiPath SE DEMO HANDOFF · 1-PAGER

# Agentic source selection on UiPath.

A best-value source selection, proposals in to award, run by one Maestro process. Agents and robots do the reading, checking and drafting; people make every decision. Synthetic data only.

## Use case

Best-value proposal evaluation in five stages, intake to award, then a hand-off to contract management.

**Built to reuse:** Federal (FAR Part 15) or State & Local (K-12 RFP) at sign-in; the agency, people and documents live in config.

**The pattern travels:** agent drafts, person decides, record builds itself. It fits grant reviews, claims and permits too.

## Target persona

- **Buyers:** Heads of Contracting Activity, Senior Procurement Executives, acquisition CIOs, state and district CPOs
- **Users:** Contracting Officer, three evaluators, SSEB Chair, Source Selection Authority
- **Fit:** DoD and federal civilian (the demo is a VA requirement), State & Local education

## Components used

| | | |
|---|---|---|
| **Maestro BPMN**<br>`SourceSelectionProcess`: five stages, SLAs, hand-offs | **Six low-code agents**<br>Plan, findings, consensus and the decision | **Robots**<br>`SS_Robots`: ingest, compliance, price, filing |
| **IXP**<br>Proposal cover, price schedule, past performance | **Data Fabric and buckets**<br>The record and audit trail, proposals in, award record out | **Action Center**<br>`ss-taskforms`: every review and signature |
| **Coded web app**<br>`ss-workspace`: workspace, wizard, evidence trace | **AI Trust Layer**<br>Guardrails screen every agent for prompt injection and sensitive data | **Hand-off**<br>Contract Management, on the same record |

## Value metrics

| | | |
|---|---|---|
| **255 days**<br>median, solicitation to award, largest federal contracts (GAO) | **52%**<br>of GAO protest cases ended with relief, FY2025 | **5 min 48 s**<br>robot and agent time for one full run |
| **45**<br>findings drafted, each cited to its page | **~15 hrs**<br>evaluator writing handed to agents per evaluation (est.: 45 findings × 20 min) | **87**<br>audit events: a protest-ready record |

## Setup

1. Open the workspace at uipathlabs.uipath.host/source-selection and choose Federal.
2. As Dana Whitfield, start a New source selection with the VA package from the solution kit. Agents build the plan; start the run.
3. Release the proposals, then submit the worksheets as Marcus Reyes and Priya Natarajan. Tom's worksheet is the live demo.

**Solution kit** (test documents, expected agent output, tenant setup): uipathlabs.uipath.host/source-selection-solution-kit

## Reset and rerun

- **Start over:** as Jordan Ellis (System Admin), Delete evaluation, then stage it again.
- **Between takes:** `tools/reset.py <solicitation>` clears the work and sets it back to Proposals Received.
- **Jump in mid-stream:** evaluations parked at price (FA8771-27-R-0031) and at the award decision (75N910-27-R-0052).
