UiPath

SOLUTION KIT · AGENTIC SOURCE SELECTION

Source selection solution kit.

Everything you need to stage, run and reset the agentic source selection demo: where to go, the test documents, the reset tools and how to stand it up in another tenant. All data is synthetic.

Open the workspace | GitHub repo | All test data (.zip)

1 Open the workspace

`https://uipathlabs.uipath.host/source-selection#/` Copy link

Sign in with your UiPath account in the uipathlabs organization, then choose **Federal** on the sign-in screen (State & Local runs the same process as a K-12 district RFP). One sign-in plays every role: switch people from the persona menu in the sidebar.

- **Access first.** Evaluations are visible to anyone in the tenant, but the tasks, the Maestro run and the proposal PDFs need a role on the `AMER Presales/Public Sector/Procurement` folder. Members of AMER_SE_PublicSector and AMER_SE_Other have it; anyone else needs a folder assignment before they try the demo.

Persona	Role	What they do in the demo
Dana Whitfield	Contracting Officer	Creates the evaluation, releases proposals, makes the price determination
Marcus Reyes, Priya Natarajan, Tom Okafor	Evaluators 1–3	Review the drafted findings and rate their assigned factors
Rebecca Hale	SSEB Chair	Confirms each consensus rating and signs the consensus report
James Thornton	Source Selection Authority	Writes the rationale and signs the award decision

Persona	Role	What they do in the demo
Jordan Ellis	System Admin	Deletes evaluations so a number can be staged again

2 Stage a new evaluation

The live demo starts three weeks into an evaluation: intake done and two of the three evaluators submitted, so the audience watches Tom finish his worksheet and the evaluation run on to award. Staging takes about ten minutes with either federal package below: the civilian VA one or the DoD Army one.

1. **As Dana Whitfield,** open **New source selection** and upload `Solicitation.pdf`, `IGCE.pdf` and `Section-M.pdf`. The agents fill in the plan; check it against the expected values below.
2. Assign the evaluation board (who rates which factor), add all 15 proposal volumes (they match to each offeror by file name), check the plan and **start** the source selection. Robots ingest and screen the proposals in a minute or two.
3. **Still as Dana,** open the release task in **My tasks** and release the proposals to the evaluators. The evaluation agent drafts findings for each worksheet.
4. **As Marcus Reyes,** open his worksheet, accept, edit or reject each drafted finding, rate his factors, confirm the independence statement and submit. Then do the same **as Priya Natarajan.**
5. Stop there. Tom Okafor's worksheet, the consensus (Rebecca), price (Dana) and award decision (James) are the live demo.

What the agents should fill in	Civilian · VA (36C10B-27-R-0060)	DoD · Army (W56KGU-27-R-0041)
Title and agency	Veterans Claims Intake Modernization · Department of Veterans Affairs	Army Maintenance Records Modernization · Department of the Army
Template and ratings	Civilian best-value tradeoff · adjectival	DoD best-value tradeoff · color (Blue to Red)
Contract type	Firm-fixed-price task order, one base year and four option years	Firm-fixed-price contract, one 12-month base year and four 12-month option years
Price lines	4 CLINs totalling $14,000,000	4 CLINs totalling $16,000,000
Evaluation factors	Technical Approach, Management Approach, Past Performance, Price, in descending order of importance	
Page limits	Technical 25 · Management 15 · Past Performance 10	

What the agents should fill in	Civilian · VA (36C10B-27-R-0060)	DoD · Army (W56KGU-27-R-0041)
Offerors	Tallgrass Federal Group LLC · Orinoco Digital Inc · Brightwater Systems Corp	Sentryline Defense Group LLC · Corvane Digital Inc · Ashgrove Mission Systems Corp

3 Test data and documents

Every document is fictional and carries a synthetic-demo banner. Each solicitation number can be staged once; to stage it again, delete the evaluation first (section 4) or generate a fresh package with `tools/generate_sample.py --id <number>` (add `--package army` for the DoD one).

VA · Veterans Claims Intake Modernization

CIVILIAN · 36C10B-27-R-0060

PDF Solicitation | PDF IGCE (cost estimate) | PDF Section M (evaluation criteria)

Offeror	Cover	Technical	Management	Past performance	Price
Tallgrass	PDF	PDF	PDF	PDF	PDF
Orinoco	PDF	PDF	PDF	PDF	PDF
Brightwater	PDF	PDF	PDF	PDF	PDF

Open the whole package folder on GitHub

Army · Maintenance Records Modernization

DOD · W56KGU-27-R-0041

PDF Solicitation | PDF IGCE (cost estimate) | PDF Section M (evaluation criteria)

Offeror	Cover	Technical	Management	Past performance	Price
Sentryline	PDF	PDF	PDF	PDF	PDF
Corvane	PDF	PDF	PDF	PDF	PDF
Ashgrove	PDF	PDF	PDF	PDF	PDF

Same steps as the civilian package: the agents pick the **DoD best-value tradeoff** template from the issuing agency, and Section M brings in the color ratings (Blue to Red) of the DoD

Source Selection Procedures. The package README has every expected value and the answer key, or open the whole folder on GitHub.

Willowmere USD · Student Transportation Routing and Fleet Management

STATE & LOCAL · WUSD-RFP-27-021

PDF RFP | PDF Cost estimate | PDF Evaluation criteria

Proposer	Cover	Technical	Management	Past performance	Price
Copperline	PDF	PDF	PDF	PDF	PDF
Fairhaven	PDF	PDF	PDF	PDF	PDF
Bramblewood	PDF	PDF	PDF	PDF	PDF

Sign in as **State & Local** and open **New RFP evaluation**. The package README walks through every step with the values the agents should fill in and the answer key.

4 Reset and rerun

Start over with the same number

Sign in as **Jordan Ellis** (System Admin) and choose **Delete evaluation**. It cancels the run, then deletes the proposal files and every record. Stage it again from section 2.

Clear the work between takes

Keep the evaluation but clear its offerors, pages, findings, ratings, decisions and audit events, and set it back to Proposals Received:

```
python3 tools/reset.py <solicitation>
```

The terminal version of Delete evaluation is `python3 tools/delete_solicitation.py <solicitation> --confirm <solicitation>`. Both are permanent.

Evaluations parked for jump-in demos

These stay open on purpose, so you can start a demo at any stage. Show them, but don't complete their open tasks.

Solicitation	Requirement	Waiting at
FA8771-27-R-0031	Air Force · Enterprise IT Modernization Services	Price determination (Contracting Officer)

Solicitation	Requirement	Waiting at
`75N910-27-R-0052`	HHS/NIH · Research Data Platform and Analytics Support	Award decision (Source Selection Authority)
`WUSD-RFP-27-014`	K-12 · Student Information System	Cost evaluation (Procurement Officer)
`WUSD-RFP-27-009`	K-12 · Learning Management System	Award recommendation (Award Authority)
`36C10B-27-R-0059`	VA · Veterans Claims Intake Modernization	Awarded (the record in the demo video)

5 Stand it up in another tenant

Only needed outside uipathlabs. The apps, robots and process find folders by key, so point them at your own folder and bucket keys before you deploy.

1. Clone the repo and sign in: `uip login`.
2. Create a folder with the `SS-Proposals` and `SS-Records` storage buckets (keys go in `tools/schema/bucket-keys.json`).
3. Create the Data Fabric entities from `tools/schema/*.json` and record their IDs in `tools/schema/entity-ids.json`, then load the vendor reference data and demo evaluations with `python3 tools/seed.py`. Register the wizard packages' offerors too, so they screen Compliant: `tools/generate_sample.py --seed-vendors` (civilian VA) and `tools/generate_sample.py --package army --seed-vendors` (DoD Army).
4. Create the three IXP projects (proposal cover, price schedule, past performance), train them on the corpus from `tools/generate_ixp_corpus.py` and publish each with the `live` tag.
5. Pack, publish and deploy the solution (Maestro process, six agents and the robots):

```
cd SourceSelection
uip solution resources refresh
uip solution pack . dist -v <version>
uip solution publish dist/<package>.zip
uip solution deploy run -n SourceSelection --package-name SourceSelection \
  --package-version <version> --folder-name <folder> --parent-folder-path <parent>
```

6. Build and deploy the two coded apps, `ss-workspace` (type Web) and `ss-taskforms` (type Action):

```
npm run build
uip codedapp pack dist -n <name> -v <version>
uip codedapp publish -n <name> -v <version> -t Web   # -t Action for ss-taskforms
uip codedapp deploy -n <name> --folder-key <folder key>
```
