Orinoco Digital Inc

Proposal in response to Solicitation 36C10B-27-R-0057 — Veterans Claims Intake Modernization

Department of Veterans Affairs

Volume I — Technical

1. Intelligent Document Intake and Classification

Orinoco will capture incoming claim evidence with template-based optical character recognition. Our template library covers 12 of the 43 claim form types VA receives, including VA Form 21-526EZ.

Documents that do not match a template are indexed by hand by Orinoco data entry staff at our Richmond processing center, with a target turnaround of two business days.

2. Claims Routing and Workload Management

Claims are routed with static rules that map each claim type to a regional office. VA staff can request rule changes through a monthly change board.

Orinoco will provide weekly workload reports by regional office.

3. Accessibility and Section 508 Conformance

Orinoco commits to WCAG 2.1 Level AA conformance. Automated accessibility scans run against each release candidate, and findings are fixed before production deployment.
