RESTRICTION ON DISCLOSURE AND USE OF DATA (FAR 52.215-1(e))

This proposal includes data that shall not be disclosed outside the Government and shall not be duplicated, used, or disclosed — in whole or in part — for any purpose other than to evaluate this proposal. If, however, a contract is awarded to this offeror as a result of — or in connection with — the submission of this data, the Government shall have the right to duplicate, use, or disclose the data to the extent provided in the resulting contract. This restriction does not limit the Government's right to use information contained in this data if it is obtainable from another source without restriction. The data subject to this restriction are contained in all pages of this volume.

1. Intelligent Document Intake and Classification

Tallgrass will classify and extract data from every piece of incoming claim evidence — VA Form 21-526EZ, supporting medical records, service treatment records and Veteran statements — through a single intake pipeline that combines layout-aware classification with field-level extraction.

On our current Veterans Benefits Administration document intake pilot, the pipeline processed 1.2 million claim documents across 43 form types with 94 percent straight-through classification. Documents below the confidence threshold are routed to a VA reviewer with the uncertain fields highlighted, and every correction retrains the model the following week.

Extracted data is written to the claim record with a link to the source page, so a claims processor can see exactly where each value came from.

2. Claims Routing and Workload Management

Once a claim is established, Tallgrass routes it to the national work queue using the claim's contentions, the Veteran's location and each regional office's current workload. Routing rules are maintained by VA business owners in a no-code rules editor and take effect without a software release.

Supervisors see a live workload dashboard by station and lane. On the pilot, the average time from receipt to claim establishment fell from 9 days to 2.

3. Accessibility and Section 508 Conformance

Every screen used by Veterans and VA staff is built to WCAG 2.1 Level AA. Automated accessibility checks run in the delivery pipeline and block a release on any failure.

In addition, DHS Trusted Tester certified analysts test every new screen manually each sprint, and Tallgrass delivers an updated Voluntary Product Accessibility Template (VPAT) with each release.
