RESTRICTION ON DISCLOSURE AND USE OF DATA (FAR 52.215-1(e))

This proposal includes data that shall not be disclosed outside the Government and shall not be duplicated, used, or disclosed — in whole or in part — for any purpose other than to evaluate this proposal. If, however, a contract is awarded to this offeror as a result of — or in connection with — the submission of this data, the Government shall have the right to duplicate, use, or disclose the data to the extent provided in the resulting contract. This restriction does not limit the Government's right to use information contained in this data if it is obtainable from another source without restriction. The data subject to this restriction are contained in all pages of this volume.

1. Data Platform Architecture

Lumina will deploy its research data platform, already authorized at FedRAMP Moderate, and will pursue FedRAMP High authorization within 12 months of award.

The platform separates storage and compute and provides a governed data catalog with dataset-level access policies.

2. Privacy and Controlled-Access Data Protection

Controlled-access data is protected by role-based access controls and encryption at rest and in transit. Access requests are approved by the data steward in the platform's workflow.

3. Researcher Self-Service Analytics

Researchers build cohorts with a governed, point-and-click cohort builder and analyze them in notebook workspaces that capture code, data versions and results for reproducibility.
