RESTRICTION ON DISCLOSURE AND USE OF DATA (FAR 52.215-1(e))

This proposal includes data that shall not be disclosed outside the Government and shall not be duplicated, used, or disclosed — in whole or in part — for any purpose other than to evaluate this proposal. If, however, a contract is awarded to this offeror as a result of — or in connection with — the submission of this data, the Government shall have the right to duplicate, use, or disclose the data to the extent provided in the resulting contract. This restriction does not limit the Government's right to use information contained in this data if it is obtainable from another source without restriction. The data subject to this restriction are contained in all pages of this volume.

1. Cloud Migration Methodology

Apex will migrate the 140 mission applications in the Air Force cloud environment through our Migration Factory, a repeatable pipeline that discovers, assesses, refactors and cuts over each application in waves of 12 to 15 applications.

The factory begins with automated discovery: dependency mapping agents run for 14 days against each application enclave and produce a migration blueprint covering data flows, ports, identities and integration points. Blueprints are peer reviewed by the Government product owner before a wave is scheduled.

On our current Air Force Materiel Command migration task order, the factory has moved 61 applications with a measured mean migration time of 4 days per application from cutover rehearsal to production, and zero unplanned Sev-1 outages in the last 9 months.

Each wave ends with a hypercare period of 10 business days in which the original application team and Apex site reliability engineers share an on-call rotation.

2. Cybersecurity and Continuous ATO

Apex designs every migrated application to inherit controls from the Air Force cloud platform authorization and documents the remaining application-level controls in eMASS before cutover.

After initial authorization, Apex maintains a continuous ATO. Automated control evidence collectors run daily, push results to eMASS, and open findings in the program's risk register within 24 hours of detection. The authorizing official receives a monthly control health summary.

Container images are rebuilt weekly from hardened Iron Bank bases, scanned in the pipeline, and blocked from promotion on any critical vulnerability.

3. Legacy Application Rationalization

Before migration, Apex scores every application on mission value, technical health and cost to run using the TIME model (tolerate, invest, migrate, eliminate). The rationalization board, chaired by the Government, decides the disposition of each application.

On comparable programs this step retired or consolidated 18 to 22 percent of the portfolio before migration, avoiding the cost of moving applications with no remaining mission owner.
