UiPath SE DEMO HANDOFF · 1-PAGER

Agentic source selection on UiPath.

A best-value source selection, proposals in to award, run by one Maestro process. Agents and robots do the reading, checking and drafting; people make every decision. Synthetic data only.

Use case

Best-value proposal evaluation in five stages: intake and compliance, individual evaluation, consensus, price and the award decision, then a hand-off to contract management.

Built to reuse: switch Federal (FAR Part 15) or State & Local (K-12 RFP) at sign-in; the agency, people and documents live in config.

Target persona

- **Buyers:** Heads of Contracting Activity, Senior Procurement Executives, acquisition CIOs, state and district CPOs
- **Users:** Contracting Officer, three evaluators, SSEB Chair, Source Selection Authority
- **Fit:** DoD and federal civilian (the demo is a VA requirement), State & Local education

Components used

Maestro BPMN `SourceSelectionProcess`: five stages, SLAs, hand-offs	**Six low-code agents** Plan, findings, consensus and the decision	**Robots** `SS_Robots`: ingest, compliance, price, filing
IXP Proposal cover, price schedule, past performance	**Data Fabric** Offerors, findings, ratings, decisions, audit trail	**Action Center** `ss-taskforms`: every review and signature
Coded web app `ss-workspace`: workspace, wizard, evidence trace	**Storage buckets** `SS-Proposals` in, `SS-Records` out	**Hand-off** Contract Management, on the same record

Value metrics

255 days median, solicitation to award, largest federal contracts (GAO)	**52%** of GAO protest cases ended with relief, FY2025	**5 min 48 s** robot and agent time for one full run
45 findings drafted, each cited to its page	**15 / 15** volumes read by IXP / compliance checks run	**87** audit events: a protest-ready record

Setup

1. Open the workspace at uipathlabs.uipath.host/source-selection and choose Federal.
2. As Dana Whitfield, start a New source selection with the VA package from the solution kit. Agents build the plan; start the run.
3. Release the proposals, then submit the worksheets as Marcus Reyes and Priya Natarajan. Tom's worksheet is the live demo.

Solution kit (test documents, expected agent output, tenant setup): uipathlabs.uipath.host/source-selection-solution-kit

Reset and rerun

- **Start over:** as Jordan Ellis (System Admin), Delete evaluation, then stage it again.
- **Between takes:** `tools/reset.py <solicitation>` clears the work and sets it back to Proposals Received.
- **Jump in mid-stream:** evaluations parked at price (FA8771-27-R-0031) and at the award decision (75N910-27-R-0052).
